C -!- FUNCTION: SALIVARY PROTEIN THAT STABILIZES SALIVA SUPERSATURATED WITH CALCIUM SALITS BY INHIBITING THE PRECIPITATION OF CALCIUM PHOSPHATE SALITS BY INHIBITING THE PRECIPITATION OF CALCIUM PHOSPHATE SALITS. IT ALSO MODULATES HYDROXYAPATITE CRYSTAL FORMATION ON THE TOOTH SURFACE.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: SECRETED BY PAROTID AND SUBMANDIBULAR CG GLANDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Local
                                                                             FUNCTION: STRUCTURAL PROTEIN OF A LAYER WITHIN THE WALL OF T SPERMATOPHORE PRODUCED PROBABLY BY CELL TYPE 4 OF THE BEAN-S GLAND (BAG). FIXATION IN THE SPERMATOPHORE SEEMS TO REQUIRE COVALENT CROSS-LINKING OF SPERMATOPHORINS.

SUBCELLULAR LOCATION: Secreted.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: SPERMATOPHORE.
DEVELOPMENTAL STAGE: EXPRESSOR AT THE BEGINNING OF THE ADULT STAGE, ABOUT FOUR DAYS AFTER THE PUPAL PEAK OF ECDYSTEROIDS.
SIMILARITY: STRUCTURAL RESEMBLANCE WITH D. MELANOGASTER 336 S38 CHORIONIC PROTEIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GO:0005576; C:extracellular; ISS.

RCOoning of a novel crystal protein gene cry1K from Bacillus churingiensis subsp. morrisoni.";

FEMS Microbiol. Lett. 134:159-164(1995).

-i- FUNCTION: PROMOTES COLLOIDOSMOTIC LYSIS BY BINDING TO THE MIDGUT EPITHELIAL CELLS OF INSECTS. SELECTIVELY TOXIC TO ARTOGEIA RAPAE AND NOT ACTIVE ON PLUTELLA XYLOSTELLA.

-i- DEVELOPMENTAL STAGE: THE CRYSTAL PROTEIN IS PRODUCED DURING SPORULATION AND IS ACCUMULATED BOTH AS AN INCLUSION AND AS PART OF THE SPORE COAT.
                                                                                                                                                                                                                                                     Q45715;

Library is oligo-dT primed and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, darenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTANGGCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGGCCGAGCGGCCGACATG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."

                                                                                                                                                                                                                   //notes Torgan: Pooled Glandular; Vector: pDNR-LIB; Site 1:
SfiI (ggcasttatggc); Site 2: SfiI (ggcgcctcggcc);
Library is oligo-dT primed and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGCCGAGCGGCGACAAG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb): 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sfil (ggccattatggcc); Site_2: Sfil (ggccgcttcggcc);
Library is oligo-dT primed and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATAATGGCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGGCCGAGGCGGCAATG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."

Library is oligo-dT primed_and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTATGGCC.3' and 3' adaptor sequence:
5'-ATTCTAGAGGCCGAGCAGCGGCGACATG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."

                                                                                                                                                                                  Sfil (ggccattatggc); Site 2: Sfil (ggccgcttggc);
Library is oligo-dT primed and directionally cloned.cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrenal, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGGCCGAGCGCGACATG-dT(30)BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
by CR: This library was enriched for full-length clones
and was constructed by Clonech Laboratories (Palo Alto,
CA). Note: this is a NIH MGC Library."
